

Running the API on macOS

- Install Stardog and make sure it's activated
- Open the .env file and change the following parts:
 - The BASEDIR and APIDIR to your System-path of this directory
 - The Stardog (SD) Endpoint, User and Password to fit your Stardog configuration
- Open the run.sh file and change the following parts:
 - The STARDOG-Variable to your systempath of Stardog-home
 - The AOD-Variable to your System-path of this directory (Same as BASEDIR)
- Setup a Python environment in the basedirectory using the command `python3 -m venv /venv`
- Run `sh run.sh` and enjoy!
